

WHAT ARE ACTIVProcesses?

The Afterburner Group places high value on project success, results, and customer satisfaction.

To deliver, we pay particular attention to ensuring that all engagements operate under the banner of “no surprises.” That is, we ensure that our customers fully understand the detailed activities, who will be working them, what the anticipated outcomes are, explicit timelines for delivery, and measurement criteria.

We take the guesswork out of every project, every time.

Borne out of over 20 years of business leadership, The Afterburner Group has designed a high-level process which delivers success:

BENEFITS OF ACTIVProcesses?

Faster Project Initiation and Closure

Clearer Expectation Management

“No Surprises” Project Environment

Full Team Integration & Productivity

Predictably Hitting the Objectives

No Continuing Dependencies

ACTIVPROCESSES PORTFOLIO

Our project proven methods have brought customer success and leadership every time. In every engagement your success becomes our success.

Kickoff Meeting: A critical part of every project is the first kick-off meeting. We come prepared to present a plan, discover and formalize roles and responsibilities, and obtain agreement on project cadence, objectives, and success criteria.

Full Project Plan: We never show up with an idea or a rough outline. We come prepared by presenting a full, but flexible project plan outlining activities/tasks, their owners, their starting/ending dates, and any dependencies. We use standard tools such as MS-Project so you can manage the project from your desktop as we do.

Achievement Map: This is a visual project ‘roadmap’ used by all parties to ensure that details aren’t overlooked and that tasks stay on calendar. Included in this map are regular communication checkpoints to ensure frequent interaction.

QuickStart: This is a suite of formalized sub-processes, templates, and surveys which ensure the project is started quickly and that time is not wasted in the gathering of data - both internally and externally.

LeaderTools: Designed primarily for individual business leaders, LeaderTools is a set of processes and methods for coaching company leaders, managers, and team members to achieve greater productivity and success.

KnowledgeShift: The Afterburner Group wants you and your organization to be productive well beyond the engagement. Therefore, we have formalized a set of processes that ensure that there is full knowledge/IP transfer to your employees. This ensures that you can move forward independently..

Value Report: Optional to every engagement, The Afterburner Group will baseline your organization, project, product, or people. From there we will deliver a ‘best practices’ comparison, highlighting any areas for improvement. At the conclusion of the engagement, we will re-assess individual or organizational progress and any further recommendations. It’s a great way to get a ‘snapshot’ of your organization along key, critical value points.

LEAD LIKE NEVER BEFORE.™
